## Leadership Advantage Brief

### The selection thesis

The platform can be learned. The operating system has to be led. USAA gains the most from a director who can connect process engineering, technology, risk, economics, people, and member outcomes - then make that system repeatable.

#### ENTERPRISE OPERATING RANGE

- **Process and controls:** quality systems, root cause, standard work, measures, decision rights, and high-reliability execution.
- **Scale and cadence:** 24/7 leadership routines, throughput visibility, escalation, Lean/Gemba practice, and frontline coaching.
- **Automation and AI:** opportunity framing, workflow design, human authority, evaluation, telemetry, and governance rails.
- **Transformation leadership:** cross-functional integration across operations, engineering, quality, ERP, CRM, support, and customer workflows.

#### MANDATE FIT

- Align BPM leaders, Process Engineers, process owners, risk, technology, and finance around the same portfolio decisions.
- Select tools from process truth, business need, control requirements, and operating economics.
- Build business cases tied to member value, employee flow, quality, risk, adoption, and maintenance burden.
- Turn successful automations into standards, coaching capability, reusable patterns, and measurable realized value.

#### WHAT USAA GAINS

##### Better selection

Weak candidates are redesigned early; strong candidates receive clear ownership and evidence.

##### Stronger adoption

Automation is built into real work, leader cadence, training, and frontline accountability.

##### Visible assurance

Human authority, controls, monitoring, fallback, and value ownership are legible before scale.

#### FAST-START MODEL

1. Learn the current portfolio, platforms, risk obligations, process-intelligence capability, and decision rights.
2. Apply the Automation Assurance Twin to a bounded mix of promising, stalled, and underperforming cases.
3. Coach Process Engineers and partners through evidence-backed decisions using real work.
4. Convert proven patterns into standards, platform guidance, and a quarterly value-and-control review.

#### WHY THIS BACKGROUND IS DIFFERENTIATED

Many candidates will know an automation tool. Fewer have led the full operating system around the tool: the process, controls, people, cadence, economics, escalation, and adoption required to make automation sustainable across an enterprise. That is the advantage Russell brings.
